SUMMARY

Computer Science MSc student at TU/e with experience in software development, teaching, and building practical tools across Python, Java, SQL, React, Spring Boot, Vue, and TypeScript. Interested in applying software, data processing, automation, and AI-enabled tools to real-world engineering and sustainability challenges.

EXPERIENCE

Software developer
SST software

- Developed web application features using Java Spring, Vue, and TypeScript, working across backend and frontend components.

Teaching assistant
University of Twente

- Supported students in programming courses by explaining concepts, answering questions, and helping debug assignments.
- Served as Head TA for a concurrency course, helping coordinate student support and teaching activities.

Software developer
NextSelect

- Developed web features using PHP, HTML, and CSS while communicating with clients to understand requirements and deliver practical improvements.

Teaching Assistant
Eindhoven University of Technology

EDUCATION

BSc Technical Computer Science
University of Twente
08/2021 - 06/2024
GPA 8.3 / 10

- Graduated Cum Laude

MSc Computer Science
Eindhoven University of Technology
07/2024 - 07/2026

PROJECTS

Master's thesis: distance measure for river networks

Developing a distance/similarity measure for river networks to have a measure that is geometrically and topologically consistent.

AI Waste Sorting System – Efteling Project

Building an AI-based automatic trash-sorting system for a real-world client context. Working on classification, system integration, practical constraints, and sustainability-oriented automation.

Interactive Fractals Exhibit – NEMO Science Museum Amsterdam

Developed a Unity-based interactive simulation for a temporary museum exhibition teaching children about fractals across scales, controlled through physical buttons and knobs.

Green Light District – Smart Traffic-Light Prototype

Developed a prototype for alternative traffic-light control using Raspberry Pi, Python/Django, and sensor-based logic. Explored how software and automation can support smarter mobility and infrastructure systems.

Gesture Groove – Gesture-Based Music Interaction Prototype

Built a prototype exploring gesture-based interaction for music/control, combining rapid prototyping, computer vision, input processing, and interactive feedback.

TECHNICAL SKILLS

Programming
[Python](#) [Java](#) [SQL](#) [JavaScript](#)
[TypeScript](#) [Haskell](#)

Frameworks and Tools
[React](#) [Django](#) [Spring Boot](#) [Unity](#) [Git](#)
[ANTLR](#)

Domains
[AI/ML](#) [Algorithms](#) [Simulation](#)
[Data Processing](#) [Interactive Systems](#)

KEY ACHIEVEMENTS

Graduated Cum Laude

Graduated cum laude from my Bachelor's programme and currently on track to complete my Master's with cum laude distinction.

Head Teaching Assistant

Served as Head TA for a concurrency course, supporting students, explaining complex technical concepts, and helping coordinate teaching activities.

Real Client Projects

Worked on technical projects for external organisations including Efteling and NEMO Science Museum, applying Computer Science in practical, public-facing contexts.

Rapid Technology Adoption

Quickly learn and apply new languages, frameworks, and tools across projects, from Unity and physical interfaces to AI systems, web development, and algorithmic research.

INTERESTS

Digital Engineering

Interested in building software, data, AI, and simulation tools that support real-world engineering, sustainability, and infrastructure challenges.

Applied Problem Solving

Enjoy learning new technologies quickly and applying them in real world situations

Science Communication

Enjoy turning complex technical ideas into easy to understand explanations or interactive experiences, such as simulations, or visualisations.
